

ENVIRONMENTAL POLICY

JULIEN SAS is concerned about future generations and in a logic of continuous improvement, JULIEN SAS has a voluntarist environmental policy. We commit ourselves to respect the regulations in force and legal requirements and other requirements applicable to environmental aspects, as far as activities, products or services are concerned ;

We have put in place different areas of intervention in order to control

and reduce the impact of our activities on the environment. This is why JULIEN SAS, is committed to :

Limit consumables while reducing the volume of printing (black and white, double-sided ...), collecting and recycling consumables (paper, toners, cartridges), choosing dematerialized documents for paper printing, using unused printed paper as drafts or notepad, visual logo inviting not to print at the bottom of each email.

Reducing travel and promoting public transportation: When necessary, the company's employees' trips are rationalized in the direction of public transportation. We are committed to promoting carpooling and public transit travel.

Using our IS to support sustainable development: Commitment to the implementation and evolution of video and web conferencing infrastructure to reduce travel to meetings.

Reducing energy expenditure: Equipping premises with low-energy light bulbs with presence detectors, renewing less energy-intensive handling equipment, investing in intelligent buildings (automatic lighting, regulated heating, optimization of natural lighting, etc.).

Reducing CO2 emissions: Reducing travel through better organization, developing the transition to a fleet of low-emission vehicles, training staff in eco-driving.

Manage and recycle: Sort operating waste (paper, cardboard, plastic, glass, printer cartridges) as well as our industrial waste in specific bins.

Reduce the use of chemicals: even the total elimination of hazardous substances by thinking about other production methods.

Reduce our water consumption: We are careful to reduce our water consumption for our production and we are working on a waterless machining project.

Ensuring responsible purchasing: through the implementation of a responsible purchasing policy, while keeping abreast of our strategic suppliers and the composition of the products chosen.

Taking environmental factors into account in the production process and in the daily actions of employees seems essential to the Group. The planned environmental strategy should make it possible to sustain the company's activities in the face of the scarcity of resources and rising energy prices. It should also reduce the impact of its activities on the environment and thus be part of a collective responsibility approach.

Eric Julien - Chairman of JULIEN SAS
